## Chapter 1: INTRODUCTION

### 1.1 Purpose

To calculate, as double-length fractions,

$$\frac{1}{2} \sin \pi x$$

and

$$\frac{1}{2} \cos \pi x$$

where  $x$  is a double-length fraction.

### 1.2 Form of Distribution

The program is distributed as a SIR mnemonic tape.

### 1.3 Method of Use

The routine is assembled as a block of the user's program and used as a sub-routine. It can be run at any program level and in any store-module.

When QDASIN is used, QDLA must also be held in store.

### 1.4 Accuracy

The maximum error is  $2^{-31}$  ( $0.5 \times 10^{-9}$ ).

## Chapter 2: FUNCTIONS

## 2. 1 Notation

$x(\text{m. s.})$  = most significant half of  $x$   
 $x(\text{l. s.})$  = least significant half of  $x$

A fraction  $x = \frac{1}{2}(n+y)$   
such that  $n$  is an integer and

$$-\frac{1}{2} \leq y < +\frac{1}{2}$$

$$\begin{aligned} Z &= \tan(\pi y/4) \\ S &= \frac{1}{2}\sin(\pi y/2) \\ C &= \frac{1}{2}\cos(\pi y/2) \end{aligned}$$

## 2. 2 Format

A double-length number,  $x$ , is held in two consecutive store locations,  $X$  and  $X+1$ :

Bit 18 of  $X+1$  must be zero;

Bit 18 of  $X$  gives sign of  $x$ ;

Bits 17-1 of  $X$  give 17 most significant numerical bits of  $X$ ;

Bits 17-1 of  $X+1$  give 17 least significant numerical bits of  $X$ ;

Negative number representation is by the usual 2's complement notation (except that bit 18 of  $X+1$  must be zero).

## 2. 3 Number Type

The operand,  $x$ , and the result must be treated by the programmer as pure fractions.

To enable this to be done, QDASIN calculates

$$\frac{1}{2} \sin \pi x \quad \text{and} \quad \frac{1}{2} \cos \pi x$$

Note: therefore, that  $x$  is the value of an angle as a fraction of  $\pi$  radians ( $180^\circ$ ).

## 2. 4 Entry and Exit

A double-length number is held in two consecutive store-locations, the description below gives only the first of the two.

Entry (for assembly by SIR)

place x in QDASIN+98  
and x(m. s.) in the accumulator  
and enter 11 QDASIN  
8 QDASIN+1

Exit  $\frac{1}{2} \sin \pi x$  in QDASIN+102  
and in QDLA+16  
 $\frac{1}{2} \cos \pi x$  in QDASIN+104

N. B. The instruction pair 11 QDASIN  
8 QDASIN+1

must not be part of a pseudo-program interpreted by QDLA.

## 2. 5 Identifiers

QDASIN must be declared as a global identifier in all blocks of a SIR program which refer to it.

### Chapter 3: METHOD USED

QDASIN uses QDLA to interpret some of the double-length calculations.

- a) The program computes

$$z = \frac{4y}{4-y^2} P(y^2)$$

where P is a power series which converges rapidly when y is in the defined range.

b)

$$S = \frac{Z}{1+Z^2}$$

$$C = \frac{1}{2} \left( \frac{1-Z^2}{1+Z^2} \right)$$

and the values are found according to the table below.

n	$\frac{1}{2} \sin \pi x$	$\frac{1}{2} \cos \pi x$
-2	-S	-C
-1	-C	S
0	S	C
+1	C	-S

### Chapter 4: TIME TAKEN

The time taken is approximately 50 milliseconds.

### Chapter 5: STORE USED

QDASIN uses 106 consecutive locations.
