Chapter 1: DESCRIPTION

1. 1 INTRODUCTION.

1. 1. 1 Purpose.

To calculate

$$\frac{1}{2} \sin \pi x$$

$$\text{and } \frac{1}{2} \cos \pi x$$

where x is the fraction in the accumulator.

1. 1. 2 Form of Distribution.

The program is distributed as a machine code tape for input by T2 or SIR.

1. 1. 3 Method of Use.

The routine is assembled as a block of the user's program and used as a sub-routine. It may be run at any program level and in any store module.

1. 1. 4 Accuracy.

The maximum error is 2^{-15} ($\approx .00003$)

1. 2 FUNCTIONS.

1. 2. 1 Number Type.

The operand, x , and the result must be treated by the programmer as pure fractions.

To enable this to be done QSIN calculates

$$\frac{1}{2} \sin \pi x$$

$$\text{and } \frac{1}{2} \cos \pi x$$

Note, therefore that on entry, the accumulator holds the value of an angle as a fraction of π radians (180°).

1. 2. 2 Entry and Exit.

Entry is made by

(for assembly by SIR) (for translation by T2).

11 QSIN
8 QSIN+1

11 0;N
8 1;N

Where N is the number of the block,

On exit

$\frac{1}{2} \sin \pi x$ is in the accumulator
and in QSIN + 67 (67;N)
 $\frac{1}{2} \cos \pi x$ is in QSIN + 68 (68;N)

1. 2. 3 Identifiers.

QSIN must be declared as a global identifier in all blocks of the users program which refer to it.

On the library tape, a mnemonic label and identifier list are separated from the coding by several inches of blank tape: the mnemonics must not be loaded into the tape reader if the tape is to be translated by T2.

1. 3 METHOD USED.

1. 3. 1 Notation.

On entry, the accumulator contains a fraction, x.

$$x = \frac{1}{2}(n + y)$$

such that n is an integer and $-\frac{1}{2} \leq y < \frac{1}{2}$

If $Z = \tan(\pi y / 4)$

$S = \frac{1}{2} \sin(\pi y / 2)$

$C = \frac{1}{2} \cos(\pi y / 2)$

a) The program computes

$$Z = \frac{4y}{4 - y^2} P(y^2)$$

Where P is a power series which is rapidly convergent when y is in the specified range.

b)

$$S = \frac{Z}{1 + Z^2}$$

$$C = \frac{1}{2} \left\{ \frac{1 - Z^2}{1 + Z^2} \right\}$$

and the values are found as shown in the table below:

n	$\frac{1}{2} \sin \pi x$	$\frac{1}{2} \cos \pi x$
- 2	- S	- C
- 1	- C	S
0	S	C
1	C	- S

1.4 TIME TAKEN.

1.4 - 1.8 milliseconds.

1.5 STORE USED.

74 consecutive locations, and the appropriate B-register.
